Professional Summary

AI/ML Engineer with experience building production-grade Machine Learning, Generative AI, RAG, and Agentic AI systems. Developed LLM-powered applications, multi-agent workflows, healthcare AI assistants, recommendation systems, forecasting solutions, and autonomous SDLC pipelines using LangChain, LangGraph, FastAPI, vector databases, and cloud-native AI services. Passionate about applying AI to healthcare, life sciences, and enterprise automation.

Experience

Sutherland Global (formerly ATMECS)

Jun 2025 – Present

AI/ML Engineer

Hyderabad

- Developing AI systems for an enterprise Workforce Optimization Platform spanning forecasting, retrieval pipelines, and recommendation workflows
- Trained, deployed, and monitored forecasting models using Azure ML improving staffing accuracy by 25–30%
- Built Smart Assist using Claude APIs, RAG, semantic search, and LangGraph-based agentic workflows, reducing information retrieval time by 60%
- Developed API integration layers connecting AI models, data pipelines, and downstream enterprise services

Sutherland Global (formerly ATMECS)

June 2024 – May 2025

AI Intern

Hyderabad

- Built a DeepStream-based face recognition system achieving 98% accuracy for real-time recognition workflows
- Engineered a healthcare-focused RAG assistant using embeddings, vector retrieval, and semantic search pipelines, reducing query response time by 40%

Projects

Agentic SDLC Platform – Autonomous Software Development

[GitHub](#) | [Live Demo](#)

- Built an autonomous end-to-end SDLC platform that converts plain-English descriptions into tested, GitHub-pushed, deployment-ready codebases without human intervention
- Designed a multi-agent LangGraph pipeline with 8 specialized agents (BA, Scrum Master, Developer, QA, Git, GitHub, DevOps) with a self-healing Dev-QA retry loop feeding pytest failures back to the Developer agent for full rewrites
- Integrated OpenRouter LLM routing with automatic failover, SSE streaming via FastAPI, and one-click Railway deployment
- Generated Dockerfile, docker-compose, and CI/CD pipeline artifacts automatically per project via a DevOps agent

StudyGenie – AI Learning Companion

[GitHub](#)

- Developed an AI learning platform integrating speech recognition, text-to-speech, RAG pipelines, and LLM across a modular 3-service microservice architecture
- Implemented local LLM inference using Ollama achieving 95% transcription accuracy, enabling privacy-preserving AI interactions without cloud dependency
- Built document ingestion and RAG pipelines using embeddings, vector databases, and semantic retrieval for summarization and quiz generation

Technical Skills

Languages: Python, JavaScript, SQL

Machine Learning: Scikit-learn, Pandas, Regression, Classification, Clustering, Feature Engineering, XGBoost

Deep Learning: PyTorch, TensorFlow, OpenCV, ResNet-50, Transformers

Generative & Agentic AI: LangChain, LangGraph, CrewAI, RAG, FAISS, ChromaDB, Hugging Face, Multi-Agent Systems

MLOps & Deployment: Azure ML, Docker, MLflow, FastAPI, CI/CD, Git, Model Monitoring

Forecasting: LSTM, ARIMA, Prophet

Databases and Cloud: MySQL, Firebase, SQLite, AWS, GCP, Azure

Education

Maharashtra Institute of Technology

2021 – 2025

B.Tech Computer Science (Honors in Cloud Computing), CGPA: 9.45, CSE Gold Medalist

Sambhajinagar

Certifications

- Google Cloud Professional Machine Learning Engineer

Achievements

- Smart India Hackathon 2023 – National Winner selected among 16 finalist teams nationwide
- ATMECS GenAI Hackathon – Top 12 among 4000+ participants
- Promoted from AI Intern to AI/ML Engineer within 5 months at Sutherland
