Professional Summary

AI/ML Engineer with experience building and deploying AI systems across forecasting, retrieval-augmented generation, recommendation workflows, and computer vision applications. Experienced in developing machine learning pipelines, LLM applications, and enterprise AI solutions from experimentation to deployment.

Experience

Sutherland Global (formerly ATMECS)

Jun 2025 – Present

AI/ML Engineer

Hyderabad

- Developing AI systems for an enterprise Workforce Optimization Platform spanning forecasting, retrieval pipelines, and recommendation workflows
- Trained and deployed forecasting models using Azure ML improving staffing accuracy by 25–30%
- Built Smart Assist using Claude and retrieval pipelines integrating forecasting outputs into recommendation workflows, reducing information retrieval time by 60%
- Developed APIM integration layers connecting AI modules and downstream services

Sutherland Global (formerly ATMECS)

Jan 2025 – May 2025

AI Intern

Hyderabad

- Built a DeepStream-based face recognition system achieving 98% accuracy for real-time recognition workflows
- Engineered a RAG-based healthcare assistant reducing query response time by 40%

Projects

StudyGenie – AI Learning Companion

[GitHub](#)

- Built an AI learning platform integrating voice interactions and document-based workflows across 3 services
- Implemented Ollama-based LLM pipelines with STT/TTS workflows achieving 95% transcription accuracy
- Built document ingestion pipelines for extracting and processing study materials for summarization and quiz generation
- Designed a local-first architecture enabling privacy-focused AI inference without cloud dependency

DermAI – Skin Disease Diagnosis

[GitHub](#)

- Built an AI-powered skin disease diagnosis system supporting prediction across 5 disease categories
- Implemented image-based classification workflows using TensorFlow and ResNet-50 pipelines
- Designed inference pipelines for real-time image-based disease classification

Technical Skills

Languages: Python, JavaScript, SQL

ML Frameworks: PyTorch, TensorFlow, Scikit-learn, OpenCV

Generative AI: RAG, LangChain, Transformers, FAISS, ChromaDB, Vector Search

Forecasting: LSTM, ARIMA, Prophet, XGBoost

Tools & Platforms: Git, Azure ML, APIM, Jupyter, NVIDIA DeepStream, Power BI

Databases: MySQL, Firebase, SQLite

Education

Maharashtra Institute of Technology

2021 – 2025

B.Tech Computer Science (Honors in Cloud Computing), CGPA: 9.45, CSE Gold Medalist

Sambhajinagar

Certifications

- Google Cloud Professional Machine Learning Engineer

Achievements

- Smart India Hackathon 2023 – National Winner selected among 16 finalist teams nationwide
- ATMECS GenAI Hackathon – Top 12 among 4000+ participants
- Promoted from AI Intern to AI/ML Engineer within 5 months at Sutherland
